Reflection For the Semester(TIS):
In this semester, I have learned a lot of things from the Industrial talk 1, Industrial talk 2. I have learned about internship opportunities and all the necessary skills and knowledge that is needed to become a software developer. While working for design thinking assignment and assignment1 I learned how to work with a group, how to divide tasks between each member and complete the task before time. I have also learned about the internal components of a computer and how to assemble and reassemble them. By studying Technology and Information Systems I learned how the internal components of a computer works(example: CPU, Hard Disk, Optical Drive, GPU, RAM). I have also learned about Big Data and Data Mining. While working for the Design Thinking Poster I have shown my creativity.
